INTRODUCTION

Since its launch on January 18, 2021 YTRON (YCJ TRON) is a project with a TRC 20 token base to empower data on the blockchain in Tron Network equity for the CRYPTO community. YTON is a solution that is here to offer a problem at one time.

The YTRON is secure because it is decentralized, useful and easy to use. Based on the TRON NETWORK Blockchain. The problem of slow and high block confirmation on other tokens can be trimmed by YTRON. with YTRON gas costs very low, following TRON NETWORK bandwidth, before we target Buyers for YTRON, and most importantly this requires a great user experience.

YTRON aims for difficult transactions to simplify interactions between users. We want to make YTRON a good ecosystem in the TRON network environment.

WHY WE CHOOSE TRON

Tron is Justin Sun ambitious project dedicated to the establishment of a decentralized system for entertainment on the internet and the infrastructure is TRC-20. The TRON protocol, one of the largest blockchain-based operating systems in the world, offers basic public blockchain support with high throughput, high scalability, and high availability for all decentralized applications in the TRON ecosystem. Tron was built to match ERC-20 prominence in Ethereum. Of course, TRC-20 is compatible with the existing scripts in ERC-20 so that any developer who is already using ERC20, can jump to TRC-20 without having to recode their script.

PURPOSE of the YTRON

YTRON is a platform for future funding that empowers data for the new equity blockchain on TRON NETWORK. TEAM is ready to build YTRON safely, useful for many people so that YTRON products are easy to use. which later it will facilitate integrated crypto currency payments and even a digital arbitrage system. Ultimately, our goal is to integrate all companies, and crypto currency asset businesses into one YTRON-compliant payment instrument, which will make the business truly efficient, transparent and reliable in the future.

BLOCKCHAIN

Blockchain description Transaction Speed can be increased if the block size is increased and the IS block time is reduced. Block size refers to the F'XED size of each block on the blockchain and this parameter cannot be changed. Block time refers to the time interval taken by the network to add a new block to the blockchain. BDT Transaction Speed is supported by TRON BLOCKCHAIN By Halving the Advantage : 1. Transaction speed of 10,000 Tron transactions versus 25 transactions on Ethereum 2. Tron transactions with no fees compared to US $ 0.02 per Ethereum transaction. 3. Tron will support and encourage his Community

TOKEN INFORMATION

Hello Everyone, Welcome to YCJ TRON

BUY NOW YCJ TRON (YTRON)
PRESALE 500 YTRON Price 45 trx = YTRON
OPEN PRESALE FROM January 18th to January 22nd

Send your TRX to the wallet address

Each wallet is limited to buying a maximum of 50 YTRON

What is YCJ TRON (YTRON)?
YCJ TRON (YTRON) is a decentralized Token built on blockchain base on TRON (the Tron network) that offers a modularized and modern way to give benifit to all Involved users. Its aims to bring businesses and developers together to solve real world problems with the shared values of transparency, fee less transactions, social and economic inclusion, environmental sustainability.

    Token details:
Token Name   : YCJ TRON
Token Symbol   :YTRON
Decimal   : 8
Tracker   : https://tronscan.org/#/token20/TTYi9YUbFvD7MgxBNWdQDhpKf8KDoeNbZ2
Price 1 (BDT)   : 45 TRX
PRESALE   :500 YTRON
Token Type   : TRC20
Total Supply   : 5.000 Supply
Contract Addresss : TTYi9YUbFvD7MgxBNWdQDhpKf8KDoeNbZ2
